SAFEHER

YOUR SAFETY, ALWAYS
WITHIN REACH

www.safeher.app

ABSTRACT

- SafeHer is a women safety application designed for quick emergency assistance.
- Provides silent SOS alerts through shake and power-button triggers.
- Shares the user's live location with trusted guardians.
- Sends automatic SMS and call alerts during emergencies.
- Uses Firebase, FusedLocation API, and Twilio SMS API for communication and tracking.
- Helps guardians respond quickly by providing real-time emergency information.

PROBLEM STATEMENT

1. Women may face emergency situations where immediate help is difficult to access.
2. Manually opening an app and pressing an SOS button may take valuable time.
3. Existing solutions may not provide continuous live location sharing.
4. Emergency contacts may need information through multiple communication channels.
5. There is a need for a system that enables quick alerts and real-time guardian support.
6. SafeHer addresses these needs through silent SOS triggers, live tracking, and automatic alerts.

SAFEHER AIMS TO PROVIDE A QUICK AND RELIABLE EMERGENCY RESPONSE SYSTEM USING SILENT SOS TRIGGERS, LIVE LOCATION TRACKING, AUTOMATIC SMS/CALLS, AND GUARDIAN ALERTS.

EXISTING SYSTEM

- Most safety apps provide a manual SOS button to send emergency alerts.
- Users generally need to open the application to trigger an alert.
- Location sharing is available, but may require manual activation.
- Emergency communication may rely mainly on notifications or messages.
- Guardian involvement is often limited to receiving alerts and location information.
- Limited options are available for silent emergency activation.

PROPOSED SYSTEM

- SafeHer provides a quick and reliable emergency response system.
- Enables silent SOS activation using shake or power-button triggers.
- Shares the user's live location with registered guardians.
- Sends automatic SMS and call alerts during emergencies.
- Uses Firebase for storing user, guardian, and emergency data.
- Uses FusedLocation API for real-time location tracking.
- Provides guardians with immediate emergency information for faster response.

OBJECTIVES

- Provide quick SOS activation during emergencies.
- Enable real-time GPS tracking of the user.
- Implement AI-based risk prediction for potential safety threats.
- Send real-time alerts to trusted guardians.
- Provide a guardian dashboard for monitoring emergencies and location.
- Ensure secure storage and synchronization of safety data using Firebase.

- One-Tap SOS – Quickly trigger an emergency alert.
 - Live GPS Tracking – Shares the user's real-time location.
 - AI Risk Detection – Identifies potential safety risks.
 - Guardian Dashboard – Allows guardians to monitor safety status and location.
-
- Emergency SMS & Calls – Sends alerts through Twilio.
 - Firebase Real-Time Data – Securely stores and synchronizes SOS, location, and risk information.
 - Emergency Contact Management – Maintains trusted contacts for alerts.

KEY FEATURES

SYSTEM ARCHITECTURE

1. User: Uses the application and triggers safety features when needed.
2. Mobile App: Acts as the main interface for the user.
3. SOS Module: Detects the emergency trigger and initiates the safety response.
4. GPS Tracking: Gets the user's real-time location.
5. AI Risk Detection: Analyzes safety-related data and identifies the risk level.
6. Firebase Backend: Stores and synchronizes user, location, SOS, and risk data.
7. Guardian Dashboard: Allows guardians to monitor the user's safety information.
8. Twilio Alerts: Sends emergency SMS/call notifications to the registered contacts.

TECHNOLOGY STACK

1. Kotlin + Android Studio – Mobile Application
2. Python + Machine Learning – AI Risk Prediction
3. Firebase – Authentication, Database & Real-Time Data
4. Fused Location API – Live GPS Tracking
5. Twilio API – Emergency SMS & Calls
6. React + JavaScript – Guardian Dashboard
7. Git & GitHub – Version Control

FUTURE SCOPE & CONCLUSION

Future Scope

1. Smartwatch / wearable integration
2. Voice-based SOS activation
3. Offline emergency support
4. Advanced AI anomaly detection
5. Integration with emergency services

Conclusion

1. Provides quick SOS and live GPS tracking for emergencies.
2. Enables AI-based risk detection and real-time alerts.
3. Allows guardians to monitor safety through a centralized dashboard.
4. Combines mobile, AI, GPS, and cloud technologies into an integrated safety solution

THANK-YOU
